- White-label cloud booking platform and ecosystem
- Bus/rail GDS with integrations from 3rd party and
- Bus/rail PoS application
- Inventory with destinations in Czechia, Slovakia, Poland, Austria, Hungary, Greece

# OSDM for Bileto

## Motivation & current work

- ARRIVA trains (AVL) serves 6 domestic long-distance routes and books seats using Bileto
- OneTicket, Czech universal rail fare system, is accepted at AVL trains
- OneTicket plans to distribute reservations and integrate all participating operators
- Bileto choosed OSDM as open format to provide reservation API for OneTicket.
- Limited reservations-only OSDM API **to be launched 1. 7. 2021** for use by OneTicket.

## Next steps

- Extend implementation to provide not only reservations, but also rail fares (long-distance, regional trains by AVL, and KPTR)
- Work with OSDM community on
  - non-EUR pricing support,
  - bus ticket sale
- Migrate existing 3rdparty distributors from proprietary REST/GraphQL API to OSDM API.

**Thank you.**
